

Deep Demonstration on Zero-Net Emissions, Resilient Maritime Hubs The Port of Piraeus

Start-ups Pitch Day

16th December 2020 (15.00 – 18.00 EET)

Online

Digitalisation, climate change, ageing populations and other factors are transforming the environment PPA operates in, creating complexity and uncertainty. In order to respond to future challenges, EIT Climate-KIC brought together an initial multidisciplinary group of local partners in the fields of business, academia, research, civil society (Piraeus Port Authority, ATHENA RC, IOBE, Thalassa Foundation, National and Kapodistrian University of Athens, FORTH/PRAZI Network) to collaboratively rework the existing vision, bringing a holistic approach. The Piraeus Port Authority, based on market dynamics and existing requirements, has prioritised 3 focus areas for the sustainability transition of the Port, namely:

1. **Energy:** Energy efficiency and alternative energy sources for ships
2. **Mobility:** Low-carbon mobility and traffic management
3. **Waste:** Waste management and circularity

On 16th December, we are inviting you to present us your ideas on the three thematic areas above. This is the perfect environment to enable efficient matching of great ideas with the necessary capital and expertise.

To express your interest and present your work, feel in this [google form](#).

Looking forward to seeing you!

Kind regards,

Deep Demonstration team
